

STRENGTH IN DEFENCE, ECONOMY, FAMILY

If we wish to have a strong enough economy that can build a strong enough military to be able to defend ourselves against looming regional threats, then we are going to need to abandon our obsession with useless forms of energy generation, such as wind and solar.

Riders on the Storm

Australian and international renewable energy merchants – corporate parasites who manipulate the political process to extract money from taxpayers and consumers – have, over recent years, leapt onto the climate change bandwagon and are now raking in billions of dollars gaming the system, raising energy prices, impoverishing consumers, fleecing taxpayers and destroying jobs. Renewable energy merchants are a scourge. They tarnish the political process, distort the market and in the case of energy, distort the entire economy.

And while most scams target naïve investors who, when they lose their money, have only themselves to blame, the renewable energy scam has been enabled by governments with consumers and taxpayers the hapless victims. Their scam uses every trick in the book including fear – “the earth will become uninhabitable” to emotional blackmail – “stop thinking about yourself and start thinking about your children’s and grandchildren’s future”.

The Science is Settled

The science of climate change is nowhere near settled.

For every scientist who says CO₂ is a problem, there’s a scientist who says it isn’t.

Friends of Science, a Canada-based non-for-profit organization comprised of more than 500 active and retired earth and atmospheric scientists and engineers, have written to the United Nations telling them there is no climate emergency. The specific points about climate change highlighted in their letter are:

1. Natural as well as anthropogenic (man-made) factors cause atmospheric warming.
2. The warming is far slower than was originally predicted.
3. Current climate policies are relying on inadequate models.
4. CO₂ is not a pollutant – it is a plant food that is essential to all life on Earth.
5. More CO₂ is actually beneficial for nature; it greens the Earth and is good for agriculture.
6. Global warming has not increased natural disasters.
7. Climate policies must respect scientific and economic realities.
8. There is no climate emergency; therefore, there is no cause for panic.

Join Us

The Australian Family Party hereby calls for the abandonment of *Net Zero* and the repeal of all climate change and renewable energy legislation. If you agree with us, then please go to www.australianfamilyparty.org.au and click Join.

**STRONG DEFENCE
STRONG ECONOMY
STRONG FAMILIES**

Let’s Make SA Great Again!

The only rational approach to climate change is to do what mankind has always done – adapt. If people can adapt and live comfortably in cities like Helsinki, Finland with temperatures of minus 5 degrees or in Phoenix, Arizona with temperatures of plus 35 degrees – a 40-degree difference – then we can certainly adapt if temperatures increase by 1 or 2 degrees. As for melting ice caps, temperatures in the Arctic and Antarctic average minus 40 degrees. A 1- or 2-degree change won’t be a crisis.
